

AI pushes Suriname company

Overview

A country of 620,000 people with a GDP of approximately \$3.5 billion - and growing rapidly as new offshore oil production from the Staatsolie-operated Block 58 and TotalEnergies discoveries begins to ramp - Suriname sits at the intersection of three of the world's most. There is uneven evidence that the promised cost-savings from AI are actually worth what companies are putting into it. Many organizations are still experimenting with chatbots and workflows. Some experts are calling it what it is: "AI-washing" — blaming layoffs on new. But what does this mean for Suriname?

Suriname stands at a strategic crossroads. It can either become an importer of AI, consuming technology built elsewhere — or it can use AI as a lever for national development, strengthening institutions and expanding opportunities. The country sits on the northeastern coast of the continent, bordered by Guyana, French. As Generative AI takes root, the next frontier emerges—Agentic AI, where autonomous agents revolutionize tasks and collaboration. During CES 2025, NVIDIA CEO Jensen Huang highlighted the rapid evolution of artificial intelligence (AI), presenting a roadmap that begins with Perception AI. Paramaribo serves as the central hub for Suriname's tech and AI initiatives, with a focus on fostering innovation and entrepreneurship in digital technologies.
