

Access Switch Uplink Core

Overview

In network architecture, uplinks serve as the core channels for communication across hierarchical devices. They manage the vertical data aggregation between access layer switches and aggregation or core level devices (such as core switches and routers) within a. our topology is that, core is 6500 which one port set vlan and directly use one 1G utp cable (only one cable)connect to 2960s-48T on each floor. there are one 2960S-48T and four 2960-24T on each floor. how to connect the switches ?

a. one. What is a Distribution Switch?

A distribution switch is installed and works at the distribution layer of the hierarchical network. The core switch is highly scalable, meaning it can be expanded as needed by simply adding more ports or modules. I have switch 6807XL working perfectly with uplink 10G access switch, but when connect switch 2960 uplink 1gb the interfaces remain down please advise thank you. 05-05-2025 02:37 AM Both ends must have the same speed and the same wavelengths. Introduction: The Hierarchical Network Model In today's complex IT environments, network design follows a structured approach to ensure.
