

Albania OSFP optical module LPO

Overview

6T OSFP 2×DR4 Linear-drive Pluggable Optics transceiver modules are designed for use in 1. 6T Ethernet links on up to 500m of single mode fiber. Forward error correction (FEC) is required to be implemented by the host in order to ensure reliable system operation. An LPO (Linear Pluggable Optics) solution offers considerable power savings for optical interconnect by removing the digital signal processing (DSP) function from the pluggable optical module. This architecture takes advantage of the capabilities in each segment of the link to form a power, cost. While the industry-standard OSFP (Octal Small Form-Factor Pluggable) module has successfully enabled 400Gbps, 800Gbps, and 1. 8Tbps of switching. The Host ASIC could be an Ethernet switch ASIC, a NIC cards ASIC. On the right-hand side, a retimed optical module is illustrated consisting out of a DSP and an optical engine. The DSP inside the module has a SerDes facing the host. The following analysis dives into the technology behind OSFP optics, performance evolution across speed classes, deployment considerations, and how LINK-PP, as a full-stack optical module manufacturer, supports high-density interconnects with complete optical, electrical, and mechanical.
