

Cable tray hoisting equipment

AI Overview

Cable trays are typically hoisted using hoists, pulleys, cranes, or lifting slings in combination with support hangers and threaded rods to safely position them during installation. Common Hoisting Methods

1. Manual Hoists and Chain Hoists: For moderate-weight cable trays, manual chain hoists or lever hoists are commonly used. These allow precise vertical lifting and controlled lowering, making them suitable for ceiling-mounted or suspended installations.
2. Electric or Motorized Hoists: For heavier trays, such as long-span ladder or trough trays, electric hoists provide faster and safer lifting. They are often mounted on temporary scaffolding or overhead beams to raise trays to the desired height.
3. Pulleys and Rope Systems: In smaller installations or tight spaces, pulley systems with ropes or cables can be used to lift trays incrementally. This method is cost-effective and allows multiple workers to coordinate the lift.
4. Cranes or Mobile Lifting Equipment: For very large or industrial installations, mobile cranes or gantry cranes may be used to hoist long or heavy cable trays into position, especially in warehouses, factories, or large commercial buildings.

Supporting Hardware During Hoisting

- Trapeze Hangers and Center-Span Supports: These support the tray while it is being hoisted and allow adjustment to the final position.
- Threaded Rods and Hangers: Used to suspend trays from ceilings, they can be temporarily attached to the hoisting equipment to stabilize the tray during lifting.
- Slings and Straps: Nylon or steel lifting slings are wrapped around the tray to distribute weight evenly and prevent bending or damage.

Safety Considerations

- Ensure the load is balanced and secured before lifting.
- Use rated lifting equipment appropriate for the tray type and weight.
- Avoid lifting trays with cables already installed unless the hoist and supports are rated for the combined weight.
- Follow installation standards such as BS EN 61537 or IEC 61537 for proper support spacing and secure attachment.
