

Cable tray installation hanger accessories

AI Overview

Proper cable tray and hanger installation ensures safe, durable, and code-compliant support for electrical cables, with correct spacing, load management, and material selection. Planning and Preparation Before installation, review approved shop drawings to determine tray layout, lengths, and hanger locations. Inspect all materials for damage and verify compliance with project specifications. Store trays and ladders horizontally on flat surfaces with timber supports at intervals of one meter, protecting them from moisture and sunlight. Ensure all tools and equipment meet contract requirements and safety standards. Hanger and Support Installation Cable trays must be supported using hangers, brackets, or strut systems. Support spacing typically ranges from 1.5 to 2 meters, with closer spacing (around 1.5 meters) for heavy power cables and up to 3 meters for light communication cables. Maximum load per hanger generally ranges from 318 kg (700 lbs) to 340 kg (750 lbs), depending on the system and manufacturer specifications. Use pre-cut rods and beam clamps to simplify installation and avoid drilling into structural steel. Lock nuts are recommended to prevent loosening due to vibrations. Installation Procedure Mount Hangers: Secure hangers or brackets at the predetermined intervals, ensuring they are level and aligned. Place Cable Trays: Position trays on the hangers, ensuring proper alignment and support along the entire length. Connect Sections: Use manufacturer-approved fittings and connectors to join tray sections, maintaining continuity and structural integrity. Check Load Distribution: Ensure cables are evenly distributed to prevent sagging or overloading any single support. Grounding and Bonding: Follow electrical codes to properly ground the tray system, especially in metallic installations. Material and Environmental Considerations Select tray and hanger materials suitable for the environment. Hot-dip galvanized steel is recommended for wet or corrosive areas to prevent rust. Ensure that all components, including bolts and nuts, have compatible...
