

Cable trays are used to store spare cables

Overview

Cable trays are used as an alternative to open wiring or electrical conduit systems, and are commonly used for cable management in commercial and industrial construction. They are especially useful in situations where changes to a wiring system are anticipated, since new cables can be installed by. Cable trays: Open support systems, ideal for bulk wiring. Raceways: Enclosed channels that hide cables, giving a cleaner finish. They are designed to accommodate and support multiple cables, providing a systematic approach to wiring. In electrical cabling, a cable tray is a metallic structure used to handle insulated electrical power distribution, control, and communication cables. In this guide, we explain what cable trays are, the main types available, how to choose the correct size and duty rating, and what to consider when designing a cable tray.
