

Comba optical module

Overview

Optical Distributed Unit (Optical by-pass) Description 2 optical ports for DAU, 2 optical ports for DRU daisy chain connection, and 8 optical ports for RFUs, with Optical by-pass function. Other Innovative Solutions of CombaFS offers a complete XGS-PON SFP+ transceiver to help customers achieve seamless and cost-efficient upgrades. XGS-PON (10-Gigabit Symmetrical Passive Optical Network) is an access standard defined by ITU-T G. 1, supporting symmetrical 10Gbps upstream and downstream transmission. Compared with. Our main product lines include ONU/ONTs, OLTs, wireless routers, CPE, and other access products to meet the needs of various telecom operators, and we are committed to delivering ultra-fast network experiences to broadband users worldwide. Tell us your business needs, and we will find the perfect. This is an RF over fiber to RF + Power over coaxial cable solution that enhances a wireless network's coverage by extending cellular services from existing cell sites to an indoor environment. The system consists of the Master Unit (MU), Fiber Expansion Unit (HUB) and Active (Antenna) Remote Unit. The Complex NGc is an in-building distributed antenna solution designed for enterprise and consumer applications. It supports a wide range of cellular generations and features analog DAS technology with a flexible off-air or wired connection mode.
