

Communication Optical Cable Transmission Quality Standards

Overview

Supplement 47 to ITU-T G-series Recommendations provides information on the general transmission characteristics of single-mode optical fibres and cables specified in the ITU-T G. It is an honour to present you with the latest version, which is another example of how ITU-T is bridging the standardization gap. Functional performance defines how well a fiber optic product transmits optical signals. Lower attenuation means less signal loss over distance. These parameters are critical for, stacles regarding interoperability and compatibility between manufacturers. This work materialized through the development of good practices, procedures and specifications documents, reflecting a certain state of the art at a given time, and the result of a consensus of all stakeholders (op lable. Testing fiber cable quality is a mandatory engineering process, not an optional best practice. In FTTH, ODN, and data center deployments.
