

Connecting a Telecom Fiber Optic Broadband to a Router

AI Overview

To connect a router to a fiber optic network, you need to link the fiber line to an ONT, then connect the ONT to your router and configure the router with your ISP credentials.

Step 1: Prepare the Equipment Ensure you have the following:

- Optical Network Terminal (ONT):** Converts fiber signals into Ethernet for your router
- Compatible router:** Look for a WAN port or SFP slot labeled for fiber or ONT connection
- Fiber optic cable:** Usually yellow with SC/APC or SC/UPC connectors
- Ethernet cable:** To connect the ONT to your router

Step 2: Install the ONT Locate the fiber wall outlet where the ISP fiber line enters your home. Connect the fiber optic cable from the wall outlet to the ONT's designated port. Power on the ONT and wait for the status lights to stabilize (typically 2-5 minutes).

Step 3: Connect the Router Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the WAN port on your router. Power on the router and wait for the indicator lights to confirm a connection.

Step 4: Configure Router Settings Access the router's admin panel via a web browser (commonly 192.168.1.1 or 192.168.0.1). Login using the default credentials (often admin/password) unless changed by the manufacturer. Navigate to WAN or network settings and select the connection type:

- PPPoE:** Requires a username and password provided by your ISP
- DHCP:** Automatically obtains IP settings from the ISP
- Static IP:** Enter IP, subnet, gateway, and DNS if provided

Update firmware, configure Wi-Fi security, and set a network name for optimal performance.

Step 5: Verify Connection Check that the router shows active internet access. Test connectivity on multiple devices. For larger homes, consider mesh Wi-Fi devices to extend coverage.

Notes and Troubleshooting If you do not have PPPoE credentials, contact your ISP; some providers use easy login or pre-configured ONTs. Ensure the...
