

Dimensions of a Small Network Cabinet

Overview

Common server rack sizes are 19-inch width, heights like 42U or 48U, and depths from ~24" to 48". Choose size based on equipment type, cooling, space, and future growth. Most IT environments default to 42U, 19-inch width, and 1000–1200 mm depth unless space constraints or special equipment dictate. In this guide, we'll walk you through everything you need to know about home networking cabinet sizes, from basic measurements to advanced selection strategies. By the end, you'll have the confidence to choose the perfect cabinet for any project. If the rack is too small, it won't fit all the servers, routers and storage equipment. The server cabinets have everything to facilitate this in the best energy efficient and modular way. Unlike the massive server racks, Server Room Environments supplies a comprehensive range of server racks and cabinets, from 4U to 47U, suitable for standard office and IT applications as well as bespoke cabinets designed for roadside and extreme environments.
