

Dispensing machine for distribution boxes

AI Overview

For efficient and precise dispensing into distribution boxes, fully automated or semi-automated volumetric dispensing machines are recommended, with options from bdtronic, Nordson, and Coperion K-Tron depending on material type and production scale.

Key Recommendations

- bdtronic Dispensing Machines** Offers fully automated 3D axis systems (B5090, B5200, B5600, B5800) capable of handling single- or multi-component materials such as epoxies, silicones, and thermal pastes. Semi-automatic systems (B3000) are ideal for smaller batches or palletized distribution boxes, providing precise dispensing with adjustable mixing ratios. Advantages include complete process monitoring, high repeatability, and flexible configuration for different box sizes and dispensing patterns.
- Nordson Automated Dispensing Systems** Vision-guided robots (PROX, PROPlus, Unity 3XP PLUS) provide high precision and repeatability, suitable for adhesives, sealants, and fluids. Systems include tabletop and standalone robots, allowing integration into existing production lines. Features such as rotating tables and optical assurance ensure accurate placement in distribution boxes, reducing material waste.
- Coperion K-Tron Pharmaceutical Dispensing Systems** Designed for pharmaceutical ingredients, including powders, excipients, and APIs, with volumetric and gravimetric feeders. Fully automated systems can dispense directly into containers or boxes, with recipe control, barcode scanning, and compliance with cGMP standards. Ideal for applications requiring high accuracy, hygiene, and traceability.

Selection Considerations

Material Type: Liquids, adhesives, or powders require different dispensing technologies (valve-based, screw feeders, or volumetric pumps).

Automation Level: Fully automated systems maximize throughput, while se...
