

# Dominica Optical Cable Line Construction

## AI Overview

Dominica is currently enhancing its digital infrastructure with an underground fibre optic cable installation from Trafalgar to Fond Cole. Project Overview The Dominica Geothermal Development Company Ltd (DGDC) is leading the construction of an underground fibre optic cable line aimed at improving connectivity across the island. The project involves installing fibre optic cables along a route that begins at Trafalgar, continues along the Louisville/Copthall Road, onto the Bath Estate Link Road, through Federation Drive and Rawles Lane, and follows the E.O. Leblanc Highway, terminating at DOMLEC in Fond Cole. This installation is part of Dominica's broader efforts to modernize its telecommunications infrastructure and support digital services. Timeline and Traffic Advisory The construction was scheduled from Friday, 13th March 2026, to Monday, 16th March 2026. During this period, motorists were advised to exercise caution and follow traffic management signs along the route to ensure safety and minimize disruption. DGDC has apologized for any inconvenience caused during the installation. Purpose and Benefits The fibre optic line is expected to enhance internet speed, reliability, and capacity for both residential and commercial users. By connecting key areas to DOMLEC, the project strengthens the island's digital backbone, supporting future technological initiatives, including smart grid management, digital services, and potential integration with regional submarine cable networks. Regional Connectivity Context While this project focuses on local underground fibre, the Caribbean region is also seeing significant investments in submarine cable systems. For example, the Trans Americas Fiber System (TAM-1) is a new submarine cable linking Florida with Central America and the Caribbean, designed to provide high-capacity, low-latency connectivity. Such regional projects complement local infrastructure by improving international bandwidth and redundancy. Additionally, nearby countries like the Dominican Repu...
