

Elevator Light Curtain Module Price

AI Overview

Elevator light curtain modules typically cost between \$200 and \$800 per unit, depending on brand, size, and features. Elevator light curtains are safety devices installed in elevator doors to prevent accidents by detecting objects or people in the doorway. Prices vary based on the brand, model, length, and number of beams. For example, standard modules from suppliers like Echo Elevator Partes or Lift-Spares range from \$200 to \$800 per single light curtain. Larger or multi-beam systems, which provide enhanced safety for high-traffic elevators, may cost more.

Factors Affecting Cost

- Length and coverage:** Taller or wider elevator doors require longer light curtains, increasing the price.
- Number of beams:** Multi-beam light curtains offer higher safety but are more expensive.
- Brand and quality:** Top brands with proven reliability may charge a premium.
- Shipping and installation:** Oversized modules may incur additional shipping costs, and professional installation is recommended for safety compliance.
- Additional features:** Some modules include advanced sensors or integration with modern elevator control systems, which can raise the price.

Budget Considerations

For a typical elevator, a single light curtain module is usually sufficient, but high-traffic or commercial elevators may require multiple modules, which can increase the total cost. Maintenance costs are generally low, as these devices are durable and resistant to scratches and impacts. In summary, when budgeting for an elevator light curtain module, expect to pay \$200–\$800 per unit, with higher-end or specialized systems costing more depending on size, features, and installation requirements.
