

Fiber optic OTDR tester event blind zone 1m

Overview

This OTDR optical fiber tester features a 4.3 inch color touchscreen for navigating measurements and viewing trace data with clarity. It supports a 1 meter event dead zone and multiple distance ranges for evaluating fiber links, identifying faults, and measuring loss. VIAVI Solutions explains the basics: “An OTDR contains a laser diode as a light source, a photodiode as a detector and a precise time base. The result is an OTDR trace: a distance-based map that shows fiber length, splice loss, connector loss, reflectance, bends, breaks and the end of the. Ensure the integrity of your fiber optic network with an Optical Time Domain Reflectometer (OTDR). OTDR testing analyzes fiber optic cable performance from end to end by testing components along the cable, including connection points, bends, and splices. Quick Setup mode: quickly set wavelength, distance range, pulse width and measurement duration; Parameters Set mode: professional technicians can set the wavelength, distance range, pulse width.
