

# Finding Cable Trays in Narrow Spaces

## Overview

Trays with a narrower width are advantageous for applications with small cable cross-sections when connected with clamps. Standard cable trays designed as corner trays are particularly suitable for control panels with limited space and high line density. It is a system that facilitates the transportation of cables and ensures that they are neatly arranged according to cable density. The Cable Tray ng standards, performance standards, test standards and application in this document have been tested extensively by competent professional engineers completely installed, without damage either to conductors or. OBO BETTERMANN has offered products and solutions for electrical installation for over 100 years. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to the enclosure.
