

How much does a custom mesh cable tray cost

AI Overview

Customizing a mesh cable tray typically costs between \$5 and \$30 per meter, depending on material, size, and installation complexity.

Material Costs The price of a mesh cable tray varies significantly by material. Steel wire mesh trays are the most affordable, generally ranging from \$5 to \$25 per meter, while aluminum trays are lighter and corrosion-resistant but cost \$6 to \$30 per meter. Stainless steel is the most expensive option, used in highly corrosive or hygienic environments, and can exceed \$30 per meter. Pre-galvanized steel is cheaper, suitable for dry indoor areas, whereas hot-dip galvanized steel adds durability for outdoor or industrial settings.

Customization Factors Customization can include cutting to specific lengths, bending corners, adding brackets, or special coatings. These modifications increase costs due to additional labor and materials. Wire mesh trays are easier to modify on-site with simple hand tools, which can reduce labor costs compared to traditional ladder or solid-bottom trays. The complexity of the installation environment—such as vertical rises, tight spaces, or long runs—also affects the final price.

Installation and Labor Labor costs are a significant part of the total expense. Wire mesh trays are generally quicker to install, requiring fewer fittings and less rework, which can save 40–60% of the overall project cost compared to conduit or traditional trays. Skilled labor rates vary by region, and additional supports, connectors, and brackets for customized trays will add to the total cost.

Total Cost Considerations For a fully customized mesh cable tray system, the total installed cost per meter can range from \$10 to \$50, depending on material, customization level, and installation complexity. Bulk orders or large projects may reduce per-meter costs, while small, highly customized runs may be at the higher end of the range. Wire mesh trays are partic...
