

# How much does thin-span optical cable cost per kilometer

## AI Overview

Thin-span optical fiber cable typically costs between \$400 and \$1,500 USD per kilometer, depending on type, core count, and installation requirements.

**Price Overview** The cost of optical fiber cable varies widely based on fiber type, strand count, jacket material, and environmental rating. For thin-span or single-mode cables (OS2), prices generally range from \$0.40 to \$1.00 USD per meter, translating to approximately \$400–\$1,000 per kilometer for the cable alone. Multimode cables like OM3 or OM4 are slightly more expensive, with OM3 costing around \$0.60–\$1.20 per meter and OM4 ranging from \$0.70–\$1.50 per meter, or \$700–\$1,500 per kilometer.

**Factors Affecting Cost**

- Fiber Type:** Single-mode (OS2) is cheaper per meter than multimode (OM3/OM4) but requires more expensive transceivers.
- Core Count:** Higher strand counts increase cost, but not linearly; a 48-core cable is not exactly double the price of a 24-core cable due to manufacturing efficiencies.
- Jacket and Environmental Rating:** Outdoor-rated or armored cables cost more than indoor-rated cables due to additional protection against weather and mechanical stress.
- Installation:** Underground or trenching installation significantly increases total cost, often exceeding the cable material cost itself.
- Bulk and Regional Considerations**
  - Bulk Purchases:** Buying in large quantities can reduce per-meter cost by 20–40% compared to retail.
  - Regional Variations:** Labor, permits, and delivery costs vary by location, which can add 5–25% to the total project cost.

**Summary** For budgeting purposes, a thin-span single-mode optical cable can be expected to cost roughly \$400–\$1,000 per kilometer, while multimode OM3/OM4 cables may range from \$700–\$1,500 per kilometer. Additional costs for installation, connectors, and testing should be considered separately, as they can significantly increase the total project...
