

How to install a Huawei A2 router and fiber optic cable

AI Overview

You connect a Huawei A2 router to a fiber optic network by linking the fiber line to an Optical Network Terminal (ONT) and then connecting the ONT to the router's WAN port via an Ethernet cable.

Step 1: Prepare the Equipment

- Fiber optic cable:** Usually provided by your ISP, with SC/APC or SC/UPC connectors.
- Optical Network Terminal (ONT):** Converts the fiber's light signal into an electrical signal compatible with your router. This is typically installed by your ISP.
- Huawei A2 router:** Ensure it is powered and ready for configuration.
- Ethernet cable:** To connect the ONT to the router's WAN port.

Step 2: Connect the Fiber to the ONT

Locate the fiber optic wall outlet where your ISP's fiber line enters your home. Remove protective caps from both the fiber cable and the ONT's optical port. Carefully insert the fiber connector into the ONT's input port until it clicks securely. Handle the fiber by its plastic housing to avoid damage.

Step 3: Link the ONT to the Router

Use an Ethernet cable to connect the ONT's Ethernet/LAN output port to the WAN port on the Huawei A2 router. If the router has self-adaptive ports, any port may work, but using the WAN port is recommended. Plug in the ONT and wait for it to power on and stabilize, which may take a few minutes. The status lights should indicate a successful connection. Power on the Huawei A2 router and wait for its indicator lights to confirm connectivity.

Step 4: Configure the Router

Connect your phone or computer to the router's default Wi-Fi network (SSID and password are on the router's label). Open the AI Life app on your phone, select CONFIGURE, then GET STARTED. Enter your Broadband account and password provided by your ISP. Set network parameters if required: IP address, Subnet mask, Default gateway, and DNS. Customize your Wi-Fi name (SSID) and password, and set a router login password. Save the configuration and verify that th...
