

Hydraulic rod electrical control box

Overview

On/off control box for single or double acting hydraulic distributors.)Hydraulic control boxes The 4668 and 4669 series boxes for electric control units are the evolution of the 4661, 4663 and 4664 series and feature unique functional characteristics for the utmost convenience and reliability. make changes in core reactivity by positioning control rods in response to the reactor manual control system (RMCS) signals. These control units send electrical signals to solenoid valves, allowing operators. Select the right electrical enclosure for your environment and the accessories you'll need to get it mounted and connected. The EHA provides users with a complete package which is optimized and tested from the network connection to the piston rod - including pre-configured drive control parameters, software, firmware and technology functions for "alternating control".
