

ISA relay protection tester return time

AI Overview

The return time for an ISA relay protection tester depends on the rental agreement, typically ranging from one week to several years, with collection arranged by the supplier. ISA relay test systems, such as the DRTS 6, are available for hire from specialized suppliers like ESS, which operate multiple locations across the UK. The minimum hire period is usually one week, and the return or collection time is coordinated with the supplier based on your location and the transport method applied. Delivery and collection charges are calculated at checkout and may vary depending on distance and logistics.

Key Considerations

Rental Duration: You can hire the tester for short-term (one week) or long-term (several years) periods depending on your project needs.

Collection and Return: The supplier typically arranges pickup or return of the equipment. The exact timing depends on your location and the chosen transport method.

Booking Requirements: A web account linked to the supplier's credit system may be required to manage hire, track orders, and schedule returns.

Equipment Handling: ISA testers like the DRTS 6 are sophisticated devices capable of testing multiple relays, energy meters, and transducers simultaneously, so proper handling and scheduling are important to avoid delays. For precise return times, it is recommended to contact the supplier directly to confirm collection schedules and any location-specific constraints. This ensures compliance with the rental agreement and avoids additional charges.
