

IoT Smart Distribution Box System

Overview

This paper describes the design, development, and deployment of a smart distribution box enabled by the Internet of Things (IoT) with the goal of improving defect detection, power monitoring, and overall energy management in single-phase residential power applications. Abstract: The Smart Socket Monitoring and Protection System is an ESP32-based electrical safety and energy monitoring solution. It uses an AC voltage sensor and two ACS712 current sensors to measure real-time voltage, current, and power for the system loads. It is like the main hub for all your electrical circuits. Nevertheless, practical development of cost-effective intelligent condition monitoring, protection, and control techniques for household distribution systems is still a challenging task. Utilizing a NodeMCU microcontroller unit, the system integrates a 4-channel relay for load management via voice. Lanbras IoT Smart Box is a versatile, connected device designed to enable seamless communication between various Internet of Things (IoT) devices and networks. The PZEM-004T100A module for.
