

Moroccan electrical distribution box dimensions

AI Overview

Construction site electrical distribution boxes in Morocco typically range from compact wall-mounted units of 300x200x150 mm to larger floor-standing metal cabinets exceeding 1000x800x400 mm, depending on amperage and application.

Typical Sizes and Configurations

Small to Medium Wall-Mounted Boxes: Dimensions: approximately 300–600 mm width, 200–400 mm height, 150–250 mm depth. Used for residential or light commercial construction sites. Usually support 16–63A circuits and include socket outlets and circuit breakers. Often made of metal or robust technopolymer with IP44–IP65 protection for dust and water resistance.

Large Floor-Standing or Modular Cabinets: Dimensions: typically 800–1200 mm width, 1000–2000 mm height, 400–600 mm depth. Designed for industrial or high-power construction sites. Support 100–200A or higher, with multiple distribution panels, metering, and lighting control. Constructed from cold-rolled steel or stainless steel, often with double lock doors for safety.

Specialized Construction Site Boxes: Include transformer-integrated units or pre-wired high IP-rated enclosures. Dimensions vary depending on internal components, e.g., rubber or steel housings with impact resistance. Typically comply with IEC 60439, NEN-1010, or CE standards. May feature ground fault interrupters, circuit breakers, and lockable doors.

Material and Protection Considerations: Materials: Steel sheet, stainless steel, or technopolymer. IP Ratings: IP44 for general use, IP65 for outdoor or wet environments. Mounting: Wall-mounted for smaller units, floor-standing for larger industrial setups. Safety Features: Lockable doors, double insulation, and optional circuit breakers or GFCIs.

Practical Notes for Moroccan Sites: Moroccan construction sites often follow IEC and European standards, so the dimensions and IP ratings of European products like Palazzoli ENERGY METAL...
