

No internet connection when connecting the network cable to the telecom server

Overview

The main guidance steps ask the poster to first rule out cable/port/router issues, then verify whether the adapter is getting a proper IP gateway (not an APIPA/169. x address), and finally reset the network stack (release/renew IP, flush DNS, and reset). Having a wired internet connection can often provide a more stable and faster internet experience than Wi-Fi. However, encountering issues such as your Ethernet connection showing "No Internet Access" while still connected can be frustrating. If your PC doesn't have an Ethernet port but you want to try this option, you might consider getting a. Start with the basics, like ruling out potential issues with your router and ensuring your internet connection is working fine on other devices. The good news is that many times the fix is simple and doesn't require advanced technical knowledge. Below, we'll walk you through practical steps you can take to get back.
