

One-click deployment of AI on the server

Overview

Deploy AI agents instantly with secure AI agent hosting, private GitHub middleware, and AI security scanning. Run OpenClaw, OpenHands, AgentZero, IronClaw, CrewAI, and LangChain on Railway, Vultr, Render, or your own infrastructure. Enter your Bot Token, configure persona, and deploy with guided steps Support Telegram, Discord, WhatsApp and more Enterprise-grade security, encrypted storage, privacy protection Multi-region deployment with low-latency routing Powered by OpenClaw, the popular open-source framework with 100K+. Just click "Create Instance" and in minutes you'll have your very own OpenClaw up and running. Everything runs in the cloud — no local hardware hogging, no environment headaches. Your data is stored securely in the cloud, and we handle all the server management so you can forget about sourcing. DeployAgent delivers one-click deployment, keyless AI integration, and global CDN access for AI-powered apps — from idea to production in seconds. Note: OpenClaw is formerly known as Moltbot and Clawdbot We're excited to announce 1-Click deployment for OpenClaw on DigitalOcean Droplet® servers, now starting at just \$12/month, making it faster and more affordable than ever to run always-on, agentic AI in a security-hardened cloud environment. OpenClaw works in a completely different way — it runs on your own cloud server, can connect to platforms like Telegram, WhatsApp, Slack, and Discord, and stays online 24/7.
