

Optical Cable Compression Test

Overview

Crush performance is one of the primary mechanical characteristics that are routinely tested and specified by optical-fiber cable manufacturers. Torontech's Optical Fiber Cable Crush & Cut through Testing Machine complies with employs an IEC-60794-1-2 Method E3/E12 to perform compression (Crush) test on optical cables. Cable is laid to rest under compression as per detailed specifications, and then the attenuation of fiber optics is. Effective fiber testing utilizes advanced tools such as Optical Loss Test Sets (OLTS), Optical Time-Domain Reflectometers (OTDR), and Visual Fault Locators (VFL) to diagnose and correct issues, ensuring optimal network performance. Since fiber optic transmissions typically operate in the infrared spectrum (invisible to the naked eye), visible light sources such as visual fault finders or visible fault locators can be used to. UNIVER CNC-1000 Series is designed to perform crush tests on optical cables in accordance with IEC 60794-1-2 E3. The system features a servo-controlled screw drive mechanism that applies compressive force with high precision and repeatability.
