

Optical film block for computer room switches

Overview

Switchable Smart Film provides instant privacy and security at the flick of a switch, as well as reducing solar heat gain by up to 40% and protecting from UV rays. Including films from Deskey, KBDfans, and Durock. Upgrade your space with switchable glass film that seamlessly switches between clear and frosted modes, regulating light and enhancing privacy. Hamamatsu provides various types of optical blocks that allow installation of optical components such as filters, mirrors, and lenses. Operated by wireless remote control or even voice activation! Pre-installation site visit: Our team attends site prior to installation. Optical switches are photonic devices that control the flow of light. At their simplest, they operate as on/off gates, allowing light to pass with low insertion loss in the open state and blocking transmission (causing high insertion loss) when closed. However, more advanced devices can route one. We are the producer of PDLC film from Switchfoil® and deliver the complete package, with millimeter accuracy laser cut, working and tested, for direct installation.
