

Price of 12-core non-jumping fusion splice tray

AI Overview

The price of a 12-core non-jumping (jump-free) fusion splice tray typically ranges from \$10 to \$40 per unit, depending on brand, material, and supplier. Overview A 12-core fusion splice tray is designed to hold up to 12 fiber splices and can be used in conjunction with fiber closures, distribution boxes, or enclosures. Non-jumping or jump-free trays allow fibers to be routed without crossovers, reducing bending stress and improving optical performance. These trays are compatible with various fiber types, including ribbon and non-ribbon cables, and can accommodate adapters such as FC, SC, LC, and ST. Price Factors Material and Build: Trays made from durable aluminum or high-quality polycarbonate tend to be at the higher end of the price range. Brand and Certification: Reputable brands like Corning, PLP, AFL, and Multilink may charge more due to quality assurance and compliance with ISO, UL, or CE standards. Supplier Type: Wholesale or factory-direct suppliers, especially from China, can offer lower prices, sometimes under \$15 per tray for bulk orders. Additional Features: Stackable trays, integrated storage for tail fibers, or pre-installed adapters can increase the cost. Where to Buy Fibertronics, Inc. offers standard 12-fiber fusion splice trays suitable for stacking and high-density applications. Alibaba and Made-in-China provide factory-priced options for bulk purchases, often with customization for OEM or distributor needs. FiberOptics4Sale lists multiple brands and models, including Corning and AFL, which can be purchased individually or in bulk. Recommendation For a single unit purchase, expect to pay around \$15-\$40 depending on brand and features. For bulk orders, prices can drop to \$10-\$20 per tray. Always verify compatibility with your fiber network and check supplier certifications to ensure quality and reliability.
