

Price of bending conduit for distribution boxes

AI Overview

The cost of bending and installing conduit for distribution boxes typically ranges from \$0.90 to \$2.20 per foot for standard PVC or EMT, with labor and complexity of bends significantly affecting the total price.

Material Costs

- PVC Conduit:** \$0.90–\$1.40 per foot in suburban areas, \$1.20–\$1.90 per foot in urban areas, depending on diameter and availability.
- EMT (Electrical Metallic Tubing):** Slightly higher than PVC, generally \$1.50–\$2.20 per foot, easier to bend but more expensive due to metal content.
- Rigid Steel or Aluminum:** More durable and code-compliant for certain installations, costing \$2–\$3 per foot or more, with bending requiring specialized tools.

Labor Costs

- Electricians typically charge \$45–\$120 per hour, depending on experience and region.
- Bending conduit adds labor time; each bend may take 5–15 minutes depending on complexity and conduit type. Labor can account for 50–70% of the total installed cost.
- For a short run (50 ft) with a few bends, total labor might range \$50–\$150, while longer runs with multiple bends can exceed \$500–\$1,000.

Factors Affecting Cost

- Number of Bends:** More bends increase labor and may require additional fittings.
- Conduit Type:** Flexible metallic conduit (LFMC) is easier to bend but more expensive per foot.
- Installation Environment:** Outdoor, through-wall, or high-access areas increase labor costs.
- Regional Variations:** Urban areas generally have higher labor rates; Northeast and West Coast regions may see 10–25% higher costs.
- Project Size:** Bulk purchases of conduit can reduce material cost by 15–25%.

Example Estimate

- For a 100 ft run of 1.5-inch EMT conduit with 4–6 bends in a suburban area:
- Material:** ~\$150–\$220
- Labor:** ~\$200–\$400
- Total Installed Cost:** ~\$350–\$620

This estimate can increase for rigid steel conduit, outdoor runs, or complex distribution box layouts. In summary, bending conduit for distribution box...
