

Price of outdoor optical fiber cable for AC transmission

AI Overview

Outdoor fiber optic cables typically cost between \$1 and \$6 per foot, with armored or dielectric cables for AC transmission at the higher end of this range.

Pricing Overview

The cost of outdoor fiber optic cables varies depending on fiber count, cable construction, and environmental protection. Standard material costs range from \$1 to \$6 per linear foot for retail purchases, while wholesale bulk purchases can reduce costs to \$0.09 to \$1.52 per foot. Single-mode fiber is generally less expensive per foot than multimode fiber, but multimode may require less costly equipment for short-distance applications. Armored or dielectric cables, which are often required for installation near high-voltage AC transmission lines, are more robust and typically cost \$0.50 to \$5 per foot due to additional protective layers such as steel tape or wire. Direct-burial cables, designed to withstand soil erosion and mechanical damage, also fall into this higher price range.

Factors Affecting Cost

Fiber Count: Higher strand counts increase cost proportionally. For example, a 12-strand cable may cost around \$0.50 per foot, while a 288-strand backbone cable can reach \$6 per foot.

Cable Type: Loose tube and ribbon designs are common for outdoor applications. Ribbon cables allow higher fiber density and faster mass fusion splicing, which can affect pricing.

Installation Method: Aerial installation is generally less expensive than underground duct or direct-burial installation due to reduced labor and trenching costs.

Environmental Protection: Cables designed to resist UV light, temperature fluctuations, and mechanical stress (armored or dielectric) are more expensive but necessary for AC transmission environments.

Typical Applications

Aerial fiber: Strung along poles or pylons, sometimes self-supporting without a messenger wire.

Direct-burial fiber: Armored for protection against rodents, soil erosion, and mechanical damage.
