

Pull-out ODF fiber optic patch panel

Overview

1U Pull-out Optic Distribution Frame (ODF), used for fiber backbone connection and distribution in the wiring area of data centers. It is installed in 19-inch racks and cabinets, equipped with LC adapter panels, and can accommodate a maximum of 1U 96-core fusion splicing solution. As fiber networks evolve to support Wi-Fi 7 backhaul, 10G/25G campus uplinks, 100G/400G/800G data center fabrics, and large-scale FTTx deployments, two types of fiber infrastructure remain essential but often misunderstood: Although both appear to "manage fiber," they serve very different roles in. Vertiv fiber optic patch panel series include: 19-inch drawer type fiber optic patch panel and 19-inch pull-out type ODF fiber optic patch panel. Vertiv fiber optic distribution frame is beautiful in appearance, compact in design, convenient and flexible in and out of fiber. In an era where data speeds and network reliability are non-negotiable, the patch. Fiber patch panel is primarily used for connecting and managing fiber optic lines and is commonly used in local networks and data centers. When setting up a fiber optic network.
