An Optical Distribution Frame (ODF), also known as fiber distribution frame or optical fiber distribution frame, is the central cross-connect and termination hub in fiber optic networks. It provides fiber fixing, splicing, termination, patching, and cable management in telecom rooms, data centers. Typically, per drop fiber cabling prices range from \$250 - \$1000 per drop depending on the type of fiber (OM2, OM3, OM4, or OM5), multi or single mode, PVC or plenum, average drop length, and also the number of fibers in each cable. We supply 6/8/12/16/24-port box options with SC/LC adapter compatibility, splice tray and PLC splitter configurations, wall-mount or pole-mount designs.
