

Red light pen for testing fiber optic cable breakage

Overview

The Visual Fault Locator (VFL) Pen has a visible red light source centered on 650nm. The RPEN-210 is a necessity tool that should not be missing from any fiber plant manager or fiber optic installing technician. Tool sends visible light over a fiber strand with a 10mW power, good enough to reach. Karono 10mW (8-12KM) visual fault locator is used for the measurement in single-mode or multi-mode fibers. VFLs typically use a 650nm wavelength red laser that is transmitted through the fiber. The detector will emit a 650nm bright light for fiber tracing, breaks or faults in the fiber will refract the light Long Output Distance: These fiber optic. GAOTek's High-Power Rechargeable 50mW Visual Fault Locator Pen is a compact but powerful tool designed for fiber optic testing.
