

Remote control module for distribution box

AI Overview

A Remote Control Module Distribution Box is an electrical distribution panel that allows remote management of multiple circuits via apps, RF, or IR control, integrating relays and sensor inputs for home or industrial automation.

Overview A Remote Control Module Distribution Box combines the functions of a traditional distribution box with advanced remote control capabilities. It safely distributes electrical power to multiple circuits while enabling remote switching and monitoring through mobile apps, PCs, or wireless remotes. These boxes are ideal for both industrial applications and smart home automation, allowing centralized control of lighting, appliances, and other electrical devices.

Key Features

- Relay Modules:** Uses removable relay modules (e.g., Omron) to control AC power outputs, typically supporting multiple channels such as 16+16 circuits.
- Remote Control:** Supports control via mobile apps, PC software, RF 433M wireless remotes, and IR devices, allowing independent operation of each relay.
- Sensor Integration:** Compatible with analog (0-5V) and digital sensors, including temperature (DS18B20), humidity, and RGBW LED strips.
- Network Connectivity:** Can connect to Ethernet networks and integrate with home automation platforms like Home Assistant and Node-Red.
- Manual Control:** Supports direct operation via dry contact wall switches, providing flexibility in control methods.
- Programmable Modes:** Many models allow timed or automated switching, suitable for industrial or energy management applications.

Applications

- Home Automation:** Centralized control of lighting, HVAC, and smart appliances.
- Industrial Use:** Remote management of machinery, production lines, or power distribution in factories.
- Energy Management:** Scheduling and monitoring of electrical loads to optimize energy consumption.
- Safety and Monitoring:** Integration with sensors for temperature, humidity, and other environmental factors.
