

Specifications of Cable Trays in Democratic Republic of Congo

AI Overview

IEC 61537 is the primary standard governing tray-type cable trays, including ladder-type trays, in the Democratic Republic of Congo. Overview of IEC 61537 IEC 61537 is the international standard for cable tray systems, covering design, construction, testing, and performance requirements for metallic cable trays such as steel, stainless steel, and aluminum. It ensures that cable trays can safely support electrical, control, data, and fiber optic cables under various environmental and mechanical conditions. Compliance with this standard guarantees mechanical strength, corrosion resistance, and electrical continuity, which are critical for safe and reliable cable management.

Key Requirements for Ladder-Type Cable Trays

Mechanical Strength: Ladder-type trays must withstand the weight of cables and external loads without excessive sagging. IEC 61537 specifies load testing methods and deflection limits for different span lengths.

Corrosion Resistance: Trays must have protective coatings or be made of corrosion-resistant materials to endure humid, chemical, or coastal environments.

Electrical Continuity: When used as part of an earthing system, ladder trays must maintain low resistance across joints (typically
