

Stainless steel cable tray with slanted openings

AI Overview

Stainless steel cable trays with slanted openings provide durable, corrosion-resistant cable management with angled access points for easy cable entry and exit. Material and Grades These cable trays are typically manufactured in 304 or 316 stainless steel, offering excellent corrosion resistance for indoor, outdoor, and harsh environments such as offshore, marine, petrochemical, and food processing applications. 304 stainless steel is suitable for general industrial use, while 316 stainless steel provides superior resistance to saltwater and chemical exposure. Design and Openings Cable trays with slanted or angled openings allow cables to enter or exit the tray at an angle, improving routing flexibility and reducing stress on cables. The trays often feature ventilated sides and bottoms with larger openings for cable drops, which can be insulated with plastic edge protection to prevent damage. These openings are available in various heights, such as 50 mm, 60 mm, 85 mm, and 110 mm, to accommodate different cable diameters and routing requirements. Configurations and Sizes Stainless steel cable trays come in light, medium, and heavy-duty ranges with return flanges for added strength. Standard widths include 50 mm, 75 mm, 100 mm, 150 mm, 225 mm, 300 mm, 450 mm, 600 mm, 750 mm, and 900 mm, allowing for flexible installation in diverse projects. Accessories such as couplers, bends, tees, risers, and covers are available to create complete cable management systems. Applications and Benefits Industrial and heavy-duty installations: Oil, gas, petrochemical, nuclear, and rail sectors. Marine and offshore use: Resistant to corrosion and suitable for harsh environments. Cable protection and organization: Slanted openings facilitate easy cable entry/exit, reduce bending stress, and allow secure fastening with cable ties or clamps. Maintenance and safety: Open or perfor...
