

Standard switches support PoE

Overview

A standard PoE switch is a network switch that complies with these standards. Depending on the IEEE version it supports, it may be classified as a PoE switch (802. Power over Ethernet (PoE) switches combine data and power delivery into a single Ethernet cable, simplifying deployment of devices such as access points, IP cameras, VoIP phones, and IoT equipment. The standard specifies that PSEs can supply up to 15. This feature lets the network device function without a power supply that is plugged into an. In this configuration, an Ethernet connection includes Power over Ethernet (PoE) (gray cable looping below), and a PoE splitter provides a separate data cable (gray, looping above) and power cable (black, also looping above) for a wireless access point.
