

Switch nopoeenable

Overview

If your Cisco switch PoE is not working, the most common causes are an exhausted PoE power budget, a disabled inline power configuration, physical cable faults, incompatible powered devices (PD), or a crashed PoE controller. To explicitly enable or re-enable PoE on a port, enter interface configuration mode, apply power inline auto, make sure the interface is not shut down, and verify the result with show power inline. The CLI. Power over Ethernet (PoE) has become a cornerstone technology for modern enterprise networks, enabling a single Ethernet cable to deliver both data and electrical power to devices such as IP phones, wireless access points (WAPs), and IP cameras. Connect to the switch using a console cable or SSH. This guide provides a step-by-step troubleshooting.
