

Switch restricts access IPs

Overview

Configure a firewall filter limit-mgmt-access that rejects all source addresses except the specific set of addresses defined in the manager-ip prefix list. Apply the limit-mgmt-access filter. There LAN IPs for the workstations are assigned manually because of the company I. T policies, to avoid devices (phones, tablets etc) being added to the network. Users can change their locations. 0 eq 22! I want to update the IP and make sure it's truly restricted to one single IP. Any ideas?

12-30-2015 02:53 PM Hi, You just need an access-list that allows your host and apply the access-list to the vty lines. To remove access control to the switch NTP services, use the no ntp access-group {query-only | serve-only | serve | peer} global configuration command. However, the switch restricts access. In this article, I'll walk you through the steps to configure access profiles and profiles rules for your Cisco switch. This type of functionality is often referred to as an access control list (ACL), and is implemented as a stateless firewall filter in the Junos OS.
