

Telecommunications Fiber Optic Cable Price List

AI Overview

Fiber optic cable packages typically range from \$0.25 to \$6 per foot for the cable alone, with total project costs including installation ranging from a few thousand to over \$20,000 depending on scale and complexity.

Cable Material Costs The price of fiber optic cable depends on fiber type, strand count, and jacket material. Multimode fiber is generally less expensive than single-mode fiber, while higher strand counts (e.g., 36, 72, 144, up to 1,728 strands) increase the cost but provide greater network capacity for future expansion. Typical per-foot cable costs are:

- Residential or small-business runs: \$0.25–\$1.50 per foot for cable alone
- Commercial-grade single-mode fiber: \$0.90–\$6 per foot depending on protective features and strand count

High-density cables with MTP/MPO connectors or armored designs for outdoor use are priced per foot and vary by strand count, with 12–144 fiber strands being common for backbone networks.

Installation and Project Costs Installation significantly increases the total cost. Factors include underground vs aerial deployment, trenching, conduit, labor, permits, and testing. Typical project costs are:

- Small office or residential runs: \$1,000–\$5,000 for 2,000–4,500 feet including labor and basic terminations
- Underground commercial installations: \$5,000–\$20,000 per mile
- Aerial installations: \$40,000–\$60,000 per mile
- Per household passed: \$1,000–\$1,250 for fiber deployment, excluding lateral connections to homes

Additional costs may include permits, right-of-way access, and protective ducting, which can add several hundred to several thousand dollars per project.

Key Considerations

- Fiber type:** Single-mode supports longer distances and higher speeds but costs more than multimode.
- Strand count:** Higher strand counts increase upfront cost but allow future network expansion.
- Installation environment:** Urban areas are more expensive due to labor and infrastr...
