AI Overview

A constant -50 dBm reading on an optical power meter usually indicates either a calibration issue, a disconnected or blocked input, or a failing photodiode. Common Causes

1. Calibration Drift: Optical power meters rely on internal calibration tables that convert photodiode current to dBm readings. Over time, InGaAs or Si photodiodes can drift due to aging, temperature cycling, or humidity exposure, causing inaccurate readings even if the meter powers on. Annual calibration is recommended to maintain accuracy.
2. Incorrect Wavelength Setting: The meter must be set to the wavelength of the light source. A mismatch can result in very low or negative readings because the photodiode responsivity varies with wavelength.
3. Zeroing Issues: If the meter is not zeroed properly (covering the sensor and pressing the zero/null button), it may display a fixed low reading.
4. Connector or Fiber Contamination: Dirt, dust, or damage on the fiber connector or meter input can block light, causing the meter to read near its minimum value.
5. Photodiode or Internal Electronics Failure: A damaged photodiode, faulty amplifier, or ADC can produce a constant low reading. Symptoms include the meter powering on but showing no variation in readings regardless of input light.

Recommended Troubleshooting Steps

- Check Connections: Ensure the fiber is properly connected and not bent or broken.
- Clean Connectors: Use lint-free wipes and isopropyl alcohol to clean both the fiber and meter input.
- Verify Wavelength: Confirm the meter is set to the correct wavelength for your source.
- Zero the Meter: Cover the sensor and press the zero or null button to reset the baseline.
- Compare with a Known Good Meter: Cross-check readings with a calibrated meter to determine if the device is malfunctioning.
- Inspect for Hardware Issues: If the reading remains -50 dBm, the photodiode or internal electronics may need repair or replacement.
- Calibration Check: If the meter is older than a year or has been heavily used, consider sending it for factory calibration.
