

Thickness of cable trays used in factories

Overview

Small trays (50mm) are utilized in a small number of data lines, whereas wide trays (900mm) are used in large factories. The depth or the height of the side wall ensures that the cables remain held in a safe shape. The trays are available in 3-meter (10-foot) segments made by almost. In practice, cable tray dimensions are a system of interrelated measurements —width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. From an engineering standpoint, cable tray dimensions are not. maintain spacing or to keep cables in place when the tray is ect the minimum bend radius for cables as they exit the bottom of the cable tray. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to similar or. Not all cable trays are equivalent. Trays shall be supported at a maximum span of 2.
