

Uruguay Trough-type Fireproof Cable Tray

AI Overview

Fireproof trough-type cable trays in Uruguay are available in steel and FRP, offering robust protection, fire resistance, and versatile installation for industrial and commercial applications. Overview Trough-type cable trays feature a U-shaped or channel-like design with solid bottoms and encased sides, providing secure routing and protection for electrical cables. These trays are particularly suitable for environments where fire safety, dust protection, and mechanical durability are critical. In Uruguay, suppliers offer both steel and fiberglass reinforced plastic (FRP) options, ensuring compliance with national and international safety standards. Material Options Steel (Galvanized or Stainless): Offers high fire resistance, mechanical strength, and durability. Steel trough trays are ideal for high-density cable installations and areas requiring flame retardancy. FRP (Fiberglass Reinforced Plastic): Lightweight, corrosion-resistant, and non-conductive. FRP trays provide excellent protection against dust and chemical exposure, though they may have lower heat dissipation compared to steel. Load Capacity and Specifications Trough-type trays are available in light, medium, and heavy-duty designs: Light Duty: Up to 50 kg/m, suitable for small cables and light installations. Medium Duty: 50–100 kg/m, suitable for most commercial and industrial applications. Heavy Duty: Over 100 kg/m, designed for large cables and high-density layouts. Sizes, thicknesses, and lengths can be customized to meet project requirements, and fittings are available for bends, junctions, and transitions. Fireproof and Safety Features Fire Resistance: Steel trays are inherently fireproof, while FRP trays can be manufactured with flame-retardant additives. Cable Protection: Solid-bottom troughs prevent dust, debris, and accidental contact, reducing fire hazards. Compliance: Most suppliers in Uruguay ensure adher...
