

Vietnam s Standard for Galvanized Cable Trays

AI Overview

Galvanized cable trays in Vietnam are primarily made from hot-dip or electro-galvanized steel, with thicknesses ranging from 1.5 mm to 2.5 mm, widths from 50 mm to 900 mm, and lengths of 2.4–6 meters, designed for durability, corrosion resistance, and efficient cable management.

Material and Coating Galvanized cable trays are typically manufactured from Q235 carbon steel or high-grade steel sheets, coated with a zinc layer through hot-dip galvanization or electro-galvanization. Hot-dip galvanized trays require a minimum thickness of 1.5 mm, while electro-galvanized trays may start from 1.0 mm. The zinc coating provides excellent corrosion resistance, making these trays suitable for harsh industrial environments, including power plants, data centers, and commercial buildings.

Dimensions Width: 50 mm to 900 mm Height: 50 mm to 150 mm Length: Standard lengths are 2.4–2.5 m, with some manufacturers offering 3 m and 6 m options. Thickness: 1.0–2.5 mm, with hot-dip galvanized trays requiring at least 1.5 mm.

Design Features Perforated or solid bottoms: Perforated designs allow ventilation and prevent cable overheating, while solid bottoms provide additional protection. Open-top or ladder-type structures: Facilitate easy cable installation and maintenance. Closed sides: Enhance structural integrity and cable support.

Applications Galvanized cable trays are used to support and manage power and control cables in various settings, including: Industrial workshops and factories Commercial buildings and shopping malls Oil and gas facilities Hospitals and data centers They provide a safe, organized, and accessible cable routing system, reducing installation time and maintenance costs.

Additional Specifications Load capacity: Designed to support heavy cable loads depending on width, height, and material thickness. Customization: Available in various colors, siz...
