

What is the maximum speed Mbps of the router that can be paired with a fiber optic connection

AI Overview

The fastest consumer fiber optic routers currently support speeds up to 9.7 Gbps over wired connections and over 8.5 Gbps on Wi-Fi 7 devices. Top Speeds and Technologies Wi-Fi 7 routers represent the cutting edge for fiber internet, offering multi-gigabit wireless speeds and advanced features like Multi-Link Operation (MLO) and 4096-QAM modulation. For example, the ASUS RT-BE86U can achieve up to 6.5 Gbps in real-world Wi-Fi 7 conditions and up to 9.7 Gbps over wired 10G WAN/LAN connections when paired with compatible devices. The NETGEAR Nighthawk RS700S, another Wi-Fi 7 router, supports download speeds up to 10 Gbps theoretically, with multi-gigabit Ethernet ports and tri-band coverage for up to 200 devices across 3,500 sq. ft. Real-world wireless speeds for Wi-Fi 7 devices can reach over 8.5 Gbps in close range, making it suitable for 4K/8K streaming, gaming, and AR/VR applications. For slightly older standards, Wi-Fi 6E routers like the NETGEAR RAXE500 can handle speeds up to 5,400 Mbps, which is still sufficient for most high-bandwidth fiber plans. Wired vs Wireless Performance Wired connections using 10G LAN/WAN ports provide the highest achievable speeds, up to 9.7–10 Gbps, limited only by the ISP plan and connected devices. Wireless speeds depend on distance, interference, and device compatibility. Wi-Fi 7 routers can deliver 8–9 Gbps close to the router, while Wi-Fi 6E routers typically max out around 5–6 Gbps under optimal conditions. Practical Considerations To fully utilize these speeds, your fiber plan must support multi-gigabit bandwidth. Device compatibility is crucial; older devices may not reach these maximum speeds. Tri-band routers help distribute devices efficiently, maintaining hi...
