

Where is the surveillance power distribution box

Overview

A CCTV power supply box, also known as a power distribution box, allows surveillance system installers to easily manage the power to multiple CCTV cameras at a central point (usually at the location of the DVR). This allows your camera installation to be neater. Combined with RG59U siamese cable or video baluns, wiring becomes neater and easier to manage from one source. CCTV power distribution boxes are basically electronic transformers that step down the voltage and current of typical household type (110 VAC) to either a 12 VDC or a 24AC output. Includes Extra Fuses & Screw Driver 9 Port High Power Security CCTV Camera Access Control Power Distribution Box 12V DC 10 Amp PTC Protection, with 9. In this video we will demonstrate how to connect a security camera to a surveillance DVR using BNC plug and play CCTV cables and a power distribution box.
